

Evening Brief

Date/Time Stamp: **Thursday, August 13, 2015 - 10:54 PM**

Weather Summary

Active weather day across the Great Basin with a variety of fire weather concerns. The first concern is gusty winds and RH's, with the strongest winds across western Nevada, though gusty winds will reach into central Nevada and western Idaho. These gusty winds will continue into the overnight hours. Concern number two is thunderstorms, with storms expected to develop across the eastern two thirds of the Great Basin. There is potential for isolated dry thunderstorms across portions of north central Nevada and extreme western Idaho, while storms further to the south and east will be wetter. Storms will develop this afternoon and will continue into the overnight hours, particularly those across central Nevada and western Idaho.

On Friday, a cold front will make its way into the area from the west with another day of gusty winds and low relative humidity, particularly across western Idaho and central and western Nevada. Winds will become more westerly across Idaho and Nevada on Friday afternoon as a cold front moves through the area.

On Saturday, temperatures will be cooler in the wake of the cold front. A drying trend will continue into the weekend with decreasing winds.

Preparedness Levels

Current:

Great Basin	4
National	5

Great Basin Fire Activity:

**New Fires and Acres: 28 fires 409 acres
136,904 additional acres on Large Fires**

GBCC went to PL4 due to increased initial attack activity and heavy resource commitment. Moderate IA activity continues in Northern Nevada and Western Idaho.

Resources:

GBCC is below draw-down.

- Type 2 IMT (DeMasters) will inbrief at the McCall Smokejumper Base at 1800 8/14. There are no National Caterers, Shower units, engines, crews, helicopters and radio frequencies are critically low.

Large/Emerging Fire Summary:

Soda ID-BOD-000889: 260,000 acres 11% contained. Extreme fire behavior with running and flanking. Burning in brush and grass.

West Scriver ID-SIS-000176: 500 acres 0% contained. Inbriefing of Dunford's T2 IMT occurred today. Fire continues to be active with group torching, spotting and flanking. Burning in timber and brush.

Cougar ID-BOF-000947 75 acres, 0% contained. Twelve miles northeast of Cascade, ID

Tepee Springs ID-PAF appx 100 acres. DeMasters IMT reserved.

Eagle 2 NV-HTF-030580 appx 150 acres 3% contained. Seven miles northwest of Bridgeport, CA.

Great Basin Fire Potential Summary

Fire danger will be increasing across Nevada and western Idaho over the next few days as dry, windy conditions spread into the area. There is also the potential for new fire starts overnight with isolated dry lightning across north central Nevada and western Idaho. Continued showers and thunderstorms across Utah/eastern Idaho and western Wyoming will keep fire danger suppressed for a few more days before dry air spreads into those regions as well causing fire danger to slowly increase.
